

ABSTRACT

An assembly comprising a circuit board, a socket, and an electronic device. The socket is connected to the circuit board and comprises a surface having a plurality of receptacles into which are disposed a plurality of connector pins from the electronic device. A heat sink is in thermal contact with the electronic device and has a footprint extending beyond both the electronic device and the socket. A locking lever pivotally connects to an arm extending from the socket to a position outside of the footprint of the heat sink.
